What is DARZALEX®?
DARZALEX® is a prescription medicine used to treat multiple myeloma:
- In combination with the medicines lenalidomide and dexamethasone or bortezomib and dexamethasone, in people who have received at least one prior medicine to treat multiple myeloma.
- In combination with the medicines pomalidomide and dexamethasone in people who have received at least two prior medicines to treat multiple myeloma, including lenalidomide and a proteasome inhibitor.
- Alone in people who have received at least three prior medicines to treat multiple myeloma, including a proteasome inhibitor and an immunomodulatory agent, or did not respond to a proteasome inhibitor and an immunomodulatory agent.

It is not known if DARZALEX® is safe and effective in children.

IMPORTANT SAFETY INFORMATION
DARZALEX® may cause serious reactions including:
- Infusion reactions
- Decreases in blood cell counts
- Changes in blood tests

The most common side effects of DARZALEX® include:
- tiredness
- nausea
- diarrhea
- constipation
- vomiting
- muscle spasms
- joint pain
- back pain
- fever
- chills
- dizziness
- insomnia
- cough
- shortness of breath
- swollen hands, ankles or feet
- nerve damage causing tingling, numbness or pain
- cold-like symptoms (upper respiratory infection)

Please see Important Safety Information on pages 22–25. Please click here to see Important Product Information.
Your JOURNEY

You are unique, and your experience will be unique.

Decisions and challenges are on the horizon as you continue your journey, and it’s important to remember that you and your healthcare team share one goal—

to treat your disease the way that’s best for you.

This brochure will help you learn more about DARZALEX®, a treatment that you and your healthcare team may choose to use during your treatment journey.

Definitions of bolded terms throughout this brochure can be found in the glossary on pages 32–33.

Important Safety Information

DARZALEX® may cause serious reactions including:
• Infusion reactions
• Decreases in blood cell counts
• Changes in blood tests

The most common side effects of DARZALEX® include:
• tiredness
• nausea
• diarrhea
• constipation
• vomiting
• muscle spasms
• joint pain
• back pain
• fever
• chills
• dizziness
• insomnia
• cough
• shortness of breath
• swollen hands, ankles or feet
• nerve damage causing tingling, numbness or pain
• cold-like symptoms (upper respiratory infection)
• swollen hands, ankles or feet
• nerve damage causing tingling, numbness or pain
• cold-like symptoms (upper respiratory infection)

Please see Important Safety Information on pages 22–25. Please click here to see Important Product Information.
What is DARZALEX®?

DARZALEX® (daratumumab) is a treatment used to treat a type of cancer called **multiple myeloma** as:

- part of a **combination therapy** with Revlimid® (lenalidomide) and dexamethasone or Velcade® (bortezomib) and dexamethasone, if you have received at least 1 prior medicine
- part of a combination therapy with Pomalyst® (pomalidomide) and dexamethasone if you have received at least two prior medicines, including Revlimid®, and a **proteasome inhibitor (PI)** such as Velcade®
- a **monotherapy** if you have received at least 3 prior medicines, including an **immunomodulatory agent** and a PI, or if you did not respond to a PI and an immunomodulatory agent

If your doctor is discussing treatment with DARZALEX® in combination with:

- Revlimid® (lenalidomide) and dexamethasone, please turn to page 8
- Velcade® (bortezomib) and dexamethasone, please turn to page 10
- Pomalyst® (pomalidomide) and dexamethasone, please turn to page 12

If your doctor is discussing treatment with DARZALEX® alone, please turn to page 14

---

**Important Safety Information**

**DARZALEX® may cause serious reactions including:**
- Infusion reactions
- Decreases in blood cell counts
- Changes in blood tests

**The most common side effects of DARZALEX® include:**
- tiredness
- nausea
- diarrhea
- constipation
- vomiting
- muscle spasms
- joint pain
- back pain
- fever
- chills
- dizziness
- insomnia
- cough
- shortness of breath
- swollen hands, ankles or feet
- nerve damage causing tingling, numbness or pain
- cold-like symptoms (upper respiratory infection)

Please see Important Safety Information on pages 22–25. Please [click here](#) to see Important Product Information.
DARZALEX® is a CD38-targeted monoclonal antibody

DARZALEX® is not chemotherapy. DARZALEX® is a monoclonal antibody that works in several ways. One way this monoclonal antibody works is by attaching itself to multiple myeloma cells in your body and directly killing them, and/or allowing your immune system to destroy them.

DARZALEX® targets and attaches to a protein called CD38, which is present on the surface of certain types of cells (eg, red blood cells) and is also present in high numbers on multiple myeloma cells. Since DARZALEX® targets the CD38 protein, it may also affect other cells with this protein on their surface.

How will I receive DARZALEX®?

• DARZALEX® may be given alone or together with other medicines used to treat multiple myeloma
• DARZALEX® will be given to you by intravenous (IV) infusion into your vein
• Your healthcare provider will decide the time between doses as well as how many treatments you will receive
• Your healthcare provider will give you medicines before and after each dose of DARZALEX® to help reduce the risk of infusion reactions
• If you miss any appointments, call your healthcare provider as soon as possible to reschedule your appointment

Important Safety Information

DARZALEX® may cause serious reactions including:
• Infusion reactions  • Decreases in blood cell counts  • Changes in blood tests

The most common side effects of DARZALEX® include:
• tiredness  • nausea  • diarrhea  • constipation  • vomiting  • muscle spasms  • joint pain  • back pain  • fever  • chills  • dizziness  • insomnia  • cough  • shortness of breath  • swollen hands, ankles or feet  • nerve damage causing tingling, numbness or pain  • cold-like symptoms (upper respiratory infection)

Please see Important Safety Information on pages 22–25. Please click here to see Important Product Information.
DARZALEX® (daratumumab) studied in combination with Revlimid® (lenalidomide) + dexamethasone

DARZALEX® was studied in combination with Revlimid® + dexamethasone (Rd) vs Rd alone in 569 patients who had received a minimum of 1 prior medicine for their multiple myeloma.

The main goal of the study was to measure the length of time patients lived without their multiple myeloma getting worse or their passing away from any cause.

Another goal was to measure overall response rate, which is the percentage of patients who responded to treatment.

Clinical trial results: DARZALEX® + Rd vs Rd alone

More patients responded to DARZALEX® in combination with Rd vs Rd alone

9 out of 10 Patients responded to DARZALEX® + Revlimid® + dexamethasone vs 7 out of 10 patients with Revlimid® + dexamethasone

DARZALEX® in combination with Rd increased the time patients lived without their multiple myeloma getting worse or their passing away from any cause

• 63% less risk of disease progression or passing away with DARZALEX® in combination with Rd vs Rd alone

Important Safety Information

DARZALEX® may cause serious reactions including:

• Infusion reactions
• Decreases in blood cell counts
• Changes in blood tests

The most common side effects of DARZALEX® include:

• tiredness
• nausea
• diarrhea
• constipation
• vomiting
• muscle spasms
• joint pain
• back pain
• fever
• chills
• dizziness
• insomnia
• cough
• shortness of breath
• swollen hands, ankles or feet
• nerve damage causing tingling, numbness or pain
• cold-like symptoms (upper respiratory infection)

Talk to your doctor about how response is measured.
DARZALEX® (daratumumab) studied in combination with Velcade® (bortezomib) + dexamethasone

DARZALEX® was studied in combination with Velcade® + dexamethasone (Vd) vs Vd alone in 498 patients who had received a minimum of 1 prior medicine for their multiple myeloma.

Clinical trial results: DARZALEX® + Vd vs Vd alone

More patients responded to DARZALEX® in combination with Vd than to Vd alone

Almost 8 out of 10 patients responded to DARZALEX® + Velcade® + dexamethasone vs almost 6 out of 10 patients with Velcade® + dexamethasone

DARZALEX® in combination with Vd increased the time patients lived without their multiple myeloma getting worse or their passing away from any cause

• 61% less risk of disease progression or passing away with DARZALEX® + Vd vs Vd alone

The main goal of the study was to measure the length of time patients lived without their multiple myeloma getting worse or their passing away from any cause.

Another goal was to measure overall response rate, which is the percentage of patients who responded to treatment.

Important Safety Information

DARZALEX® may cause serious reactions including:
• Infusion reactions  • Decreases in blood cell counts  • Changes in blood tests

The most common side effects of DARZALEX® include:
• tiredness  • nausea  • diarrhea  • constipation  • vomiting  • muscle spasms  • joint pain  • back pain  • fever  • chills  • dizziness  • insomnia  • cough  • shortness of breath  • swollen hands, ankles or feet  • nerve damage causing tingling, numbness or pain  • cold-like symptoms (upper respiratory infection)

Talk to your doctor about how response is measured.

Please see Important Safety Information on pages 22–25. Please click here to see Important Product Information.
DARZALEX® (daratumumab) studied in combination with Pomalyst® (pomalidomide) + dexamethasone

DARZALEX® was studied in combination with Pomalyst® and dexamethasone (Pd) in 103 patients who had received a prior proteasome inhibitor (PI) and an immunomodulatory agent. Patients had received a median of 4 prior lines of therapy for their multiple myeloma.

The main goal of the study was to measure overall response rate, which is the percentage of patients who responded to treatment.

Talk to your doctor about how response is measured.

Clinical trial results: DARZALEX® + Pd

When these patients were treated with DARZALEX® in combination with Pd, 59% responded

- This response lasted for a median duration of 13.6 months (range: 0.9+ to 14.6+ months)

Of patients who responded, response was seen between 0.9 and 2.8 months

13.6 MONTHS
Median duration of response

1 MONTH
Median time it took patients to respond to DARZALEX®

2.8 MONTHS
Maximum time it took patients to respond to DARZALEX®

Important Safety Information

DARZALEX® may cause serious reactions including:
- Infusion reactions
- Decreases in blood cell counts
- Changes in blood tests

The most common side effects of DARZALEX® include:
- tiredness
- nausea
- diarrhea
- constipation
- vomiting
- muscle spasms
- joint pain
- back pain
- fever
- chills
- dizziness
- insomnia
- cough
- shortness of breath
- swollen hands, ankles or feet
- nerve damage causing tingling, numbness or pain
- cold-like symptoms (upper respiratory infection)

Please see Important Safety Information on pages 22–25. Please click here to see Important Product Information.
DARZALEX® (daratumumab) studied as a monotherapy

DARZALEX® was studied as a monotherapy in 106 patients who had received at least 3 prior medicines to treat their multiple myeloma, including a proteasome inhibitor (PI) and an immunomodulatory agent, or did not respond to a PI and an immunomodulatory agent. Patients had received a median of 5 prior lines of therapy.

The main goal of the study was to measure overall response rate. Overall response rate is the percentage of patients who responded to treatment.

Clinical trial results: DARZALEX® as a monotherapy

When these patients were treated with DARZALEX®, 29% responded

- This response lasted for a median duration of 7.4 months

Of patients who responded, response was seen between 0.9 and 5.6 months

Important Safety Information

DARZALEX® may cause serious reactions including:

- Infusion reactions
- Decreases in blood cell counts
- Changes in blood tests

The most common side effects of DARZALEX® include:

- tiredness
- nausea
- diarrhea
- constipation
- vomiting
- muscle spasms
- joint pain
- back pain
- fever
- chills
- dizziness
- insomnia
- cough
- shortness of breath
- swollen hands, ankles or feet
- nerve damage causing tingling, numbness or pain
- cold-like symptoms (upper respiratory infection)

Talk to your doctor about how response is measured.
Leading up to your infusion

Make sure you set aside enough time in your day. With that in mind, there are some things you may want to consider:

- Wear comfortable, layered clothing
- Bring drinks and snacks
- Bring headphones, a music player, a tablet, or other activities to pass time
- Make a list of things you need to do and questions to ask your doctor

You have a lot to think about as you get started with your infusions. The maker of DARZALEX® offers tools that can direct you to support services to help you during your journey. Visit www.darzalex.com to download these tools and sign up for Janssen CarePath for DARZALEX®.

Important Safety Information

- Changes in blood tests. DARZALEX® can affect the results of blood tests to match your blood type. These changes can last for up to 6 months after your final dose of DARZALEX®. Your healthcare provider will do blood tests to match your blood type before you start treatment with DARZALEX®. Tell all of your healthcare providers that you are being treated with DARZALEX® before receiving blood transfusions.

Please see Important Safety Information on pages 22–25. Please click here to see Important Product Information.
What can I expect during treatment?

During your infusion, stay mindful of how you feel
It’s important to tell your healthcare provider right away if you get any of the symptoms listed below, which could mean you are having an infusion reaction.

Infusion reaction symptoms may include:

- shortness of breath or trouble breathing
- dizziness or lightheadedness (hypotension)
- cough
- wheezing
- throat tightness
- runny or stuffy nose
- headache
- itching
- nausea
- vomiting
- chills
- fever

The first infusion of DARZALEX® may take about 7 hours. Future infusions may take less time but can still take 3 to 5 hours.

Infusion reactions are common with DARZALEX® and can be severe.
Almost half (48%) of patients treated with DARZALEX® in clinical trials experienced an infusion reaction. Infusion reactions can occur with the first infusion (46%), the second infusion (2%), and subsequent infusions (3%). These reactions are most likely to happen during the first infusion and are less likely to happen with future infusions.

The most common side effects of DARZALEX® include tiredness, nausea, diarrhea, constipation, vomiting, muscle spasms, joint pain, back pain, fever, chills, dizziness, insomnia, cough, shortness of breath, swollen hands, ankles or feet, nerve damage causing tingling, numbness or pain, and cold-like symptoms (upper respiratory infection).

A healthcare provider will monitor you during your DARZALEX® infusion. If you do have an infusion reaction, your healthcare provider may temporarily stop your infusion or completely stop treatment with DARZALEX®.

Please see Important Safety Information on pages 22–25. Please click here to see Important Product Information.
What can I expect after treatment?

**Post-infusion medications**
You will be given medicines (corticosteroids) by mouth to lower the chance of delayed infusion reactions. In addition, if you have a history of breathing problems, such as chronic obstructive pulmonary disease, you may be given additional medications that may help prevent these problems, such as bronchodilators or inhaled corticosteroids.

**Changes in blood tests**
DARZALEX® can affect blood test results used to match your blood for transfusions. These changes can last for up to 6 months after your final dose of DARZALEX®. **Tell all of your healthcare providers that you are being treated with DARZALEX® before receiving blood transfusions.**

**Decreases in blood cell counts**
DARZALEX® can decrease white blood cell counts, which help fight infections, and blood cells called platelets, which help to clot blood. Tell your healthcare provider if you develop fever or have signs of bruising or bleeding.

Please see Important Safety Information on pages 22–25. Please click here to see Important Product Information.
What should I tell my healthcare provider before taking DARZALEX®?

Before you receive DARZALEX®, tell your healthcare provider about all of your medical conditions, including if you:

- have a history of breathing problems
- have had shingles (herpes zoster)
- are pregnant or plan to become pregnant. DARZALEX® may harm your unborn baby.

—Females who are able to become pregnant should use an effective method of birth control during treatment and for at least 3 months after your final dose of DARZALEX®. Talk to your healthcare provider about birth control methods that you can use during this time.

- are breastfeeding or plan to breastfeed. It is not known if DARZALEX® passes into your breast milk.

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements.

How will I receive DARZALEX®?

- DARZALEX® may be given alone or together with other medicines used to treat multiple myeloma.
- DARZALEX® will be given to you by intravenous (IV) infusion into your vein.

What are the possible side effects of DARZALEX®?

DARZALEX® may cause serious reactions, including:

- **Infusion reactions.** Infusion reactions are common with DARZALEX® and can be severe. Your healthcare provider may temporarily stop your infusion or completely stop treatment with DARZALEX® if you have infusion reactions.

Tell your healthcare provider right away if you get any of the following symptoms:

—shortness of breath or trouble breathing
—dizziness or lightheadedness (hypotension)
—cough
—wheezing
—throat tightness
—runny or stuffy nose
—headache
—itching
—nausea
—vomiting
—chills
—fever

- Your healthcare provider will decide the time between doses as well as how many treatments you will receive.
- Your healthcare provider will give you medicines before each dose of DARZALEX® and on the first day after each dose of DARZALEX® to help reduce the risk of infusion reactions.
- If you miss any appointments, call your healthcare provider as soon as possible to reschedule your appointment.

Janssen CarePath
Get support on your treatment path

Janssen CarePath is here to help answer your questions about treatment with DARZALEX®. Once your doctor has prescribed DARZALEX®, we will provide you with educational information and resources that may help you get started and stay on track. We’ll also give you information about potential cost support options and how this medication is given by your doctor. In addition, you’ll receive a list of questions you may want to ask your doctor and insurance carrier.

Knowing that you may have questions, a Janssen CarePath Care Coordinator is available to offer one-on-one personalized assistance with:

- **Paying for DARZALEX®**: Identifying cost support options that may help with managing your out-of-pocket costs for DARZALEX®—whether you have commercial or private health insurance, government insurance such as Medicare or Medicaid, or have no insurance coverage.

- **Getting started**: A personally assigned Janssen CarePath Care Coordinator will work closely with you and your doctor to help you get started by:
  - Reviewing your health plan benefits to help answer questions you may have about insurance coverage for DARZALEX®
  - Identifying options that may help make DARZALEX® more affordable, if needed
  - Providing transportation assistance information and referral to independent organizations that may provide assistance with costs associated with travel to and from treatment
  - Offering treatment education resources such as the DARZALEX® Comfort Kit
  - Connecting you with a clinical nurse to answer questions about your disease and treatment with DARZALEX®

**Staying on track**: Janssen CarePath offers additional support to help keep you informed about DARZALEX® and provides ongoing resources and services to help you stay on track with your DARZALEX® treatment as prescribed by your doctor. We offer:

- Ongoing e-mails and phone calls as requested from a clinical nurse throughout your journey
- Personalized, live appointment reminder calls
- Downloadable tools
- Mindfulness exercises and techniques to help you cope with stress
- Tools to help you make healthy lifestyle choices
- Information about the Advocacy Connector, a website that connects patients and caregivers to national and/or state advocacy groups that offer resources relevant to their needs. Visit [advocacyconnector.com](http://advocacyconnector.com)

Now that you have begun the journey with your DARZALEX® infusion treatment, please know that we are here to help.

**Contact Janssen CarePath to get help today.**

Other resources

Johnson & Johnson Patient Assistance Foundation, Inc. (JJPAF) provides free prescription medications to eligible individuals without insurance coverage for their medications and those who do not have adequate financial resources to pay for them. To see if you might qualify for assistance, please contact a JJPAF program specialist at 1-800-652-6227 (9 AM to 6 PM ET) or visit the foundation website at www.JJPAF.org.
Glossary of terms

**CD38**—A protein found on the surface of cells and in high numbers on myeloma cells.

**Chemotherapy**—A chemical drug that stops the growth of cancer cells, either by killing them or by stopping them from dividing. Chemotherapy may be given by mouth, injection, or infusion, or on the skin, depending on the type and stage of the cancer being treated. It may be given alone or with other treatments, such as surgery, radiation therapy, or biologic therapy.

**Combination therapy**—Use of more than one treatment to treat a certain disease or condition.

**Disease progression**—Cancer continuing to grow or spread.

**Immune system**—Several types of cells and organs that work together to help the body fight infections and other diseases.

**Immunomodulatory agents**—Drugs such as Revlimid® (lenalidomide) that change a patient’s immune response by enhancing or suppressing the immune system.

**Infusion reaction**—A side effect seen with some drugs that are given intravenously.

**Intravenous (IV) infusion**—A way of giving medicines or other fluids by inserting them into the bloodstream through a needle or tube in a vein.

**Median**—The middle number in an ordered set of values arranged from smallest to largest. Example: 3, 5, 12. The median is 5.

**Monoclonal antibody**—A man-made molecule that binds to substances in the body, including cancer cells. Monoclonal antibodies work with your immune system.

**Monotherapy**—Use of one type of treatment to treat a certain disease or condition.

**Multiple myeloma**—A type of cancer formed by malignant plasma cells. Plasma cells are found in the bone marrow.

**Proteasome inhibitors (PIs)**—Drugs such as Velcade® (bortezomib) that slow down cancer cell growth by interfering with processes that play a role in cell function.

**Protein**—Molecule made up of amino acids and needed for the body to function properly. Proteins are the basis of skin, hair, and other substances in the body.

**Response**—A measurement taken after treatment that shows a decrease in the amount of myeloma cells in the bone marrow. Response can be measured as partial or complete response.
Keeping track of your treatment with DARZALEX® (daratumumab)

DARZALEX® is administered by a healthcare provider as an intravenous (IV) infusion. Your doctor will determine your dose of DARZALEX® according to your body weight. It is recommended that you continue treatment with DARZALEX® as long as your doctor tells you to.

Talk to your healthcare team about your treatment plan with DARZALEX®.
